Wood's®

Compact, convenient, and efficient in cold environments.

The WDD80 is a desiccant dehumidifier, which means that it has great capacity, even at such low temperatures as 0°C. This makes it perfect for colder areas such as basements, summer houses, boats and caravans. Thanks to its compact design and quiet operations, the WDD80 can be used practically everywhere.

Wood's WDD80

The desiccant technique used in the WDD80 ensures high capacity, even at low temperatures. This is a great advantage when you need to dehumidify cold environments. The WDD80 has a hose connection for continuous water drainage, this way you don't have to worry about emptying the water container. By activating the ionizer you clean the air at the same time as you dehumidify it, creating the ideal indoor environment.

Technical data

Max. working area	60 m²
Recommended area	2-40 m²
Airflow Step 1	85 m³/h
Airflow Step 2	100 m³/h
Airflow Step 3	120 m³/h
Power	640 W
Tank volume	2 litres
Working interval	0°C to 37°C
Anion density (ionization)	$3,4 \times 10^6$ pcs/cm³
Fan speeds	3
Dimensions (mm)	351x180x500
Weight	6,5 kg
Sound level	36-49 dB

Features:

• 8 hours timer.
• Swinging air exhaust for drying laundry.
• 3 modes: quiet, normal and dry.
• Easy to use control panel.
• Hose connection for continuous water drainage.
• Automatic shut off when the water container is full.
• LED indication tells current humidity level.
• Ionizier for air cleaning.
• Several security functions for reliable and safe use
• Internal dry function to prevent mould forming.
